# INTERNATIONAL GENETIC EPIDEMIOLOGY SOCIETY

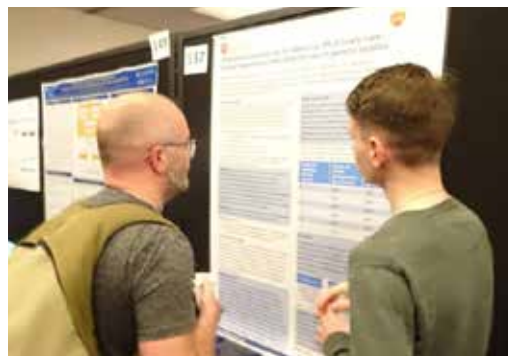

## IGES 28th ANNUAL MEETING

October 12-14, 2019  
Hilton Americas-Houston  
Houston, Texas, USA

Founded in 1991, the International Genetic Epidemiology Society (IGES) membership uniquely combines multidisciplinary global representation, with the shared goal of improved population health through genetic epidemiology and statistical genetics research. Today, the collective IGES membership, has great strength in analytical expertise across multiple “omics” technologies and are focused on approaches for biological and clinical data integration to better understand human disease and improve public health. With these new developments comes an unprecedented need to bring statistical, epidemiological and computational knowledge skills that are relevant to genetic research to a broader audience of knowledge users.

The annual IGES meeting is a key venue for the exchange of scientific knowledge on study designs and analytic approaches for advancing big data science in genomics. The audience is multi-national and diverse in their expertise and knowledge and the annual meeting provides the opportunity to share research, ideas and innovations. The 2018 annual meeting drew a record number of attendees and reflects the recognized merit of the programming and content. Sponsors for the annual meeting have an opportunity to be in front of and interact with this prestigious group!
